

## CargoSmart Tracking and Tracing Features

CargoSmart provides full visibility to your shipments from the time empty containers are picked up through to when the empty containers are returned at the destination. Save time and money by monitoring your shipment status information over the Internet rather than frequently calling your carrier. The online status updates can help you to avoid detention and demurrage charges and to determine when to file customs documents, submit original B/Ls, and pay freight charges.

### Cargo Tracking

Cargo Tracking lets you look up shipment information by booking, bill of lading, container, and associated purchase order numbers. The search results show routing, container location, carrier, mode, and status. Customers in China and Hong Kong can also track containers with text messaging (SMS) from their mobile phones in English or Chinese.

#### Key Features

- "Hot List" lets you quickly track up to 25 B/L and container numbers simultaneously
- Convenient summary of latest container activity
- Planned routing and estimated departure and arrival dates
- Displays over 20 milestone events (from empty container pickup through empty container return)
- View details for both active shipments and past shipments of up to two years

### North America Rail Tracing

North America Rail Tracing allows you to search for rail shipment information by container and associated purchase order numbers. It also provides the last 30 days of rail history for containers moving through North America, displaying container status, rail carrier, rail destination, sighting point location, and date/time for each container milestone.

#### Key Features

- Search for rail shipment information by container and associated purchase order numbers
- Provides the last 30 days of rail history for containers moving through North America
- Displays status, rail carrier, rail destination, sighting point location, and date/time for each container movement

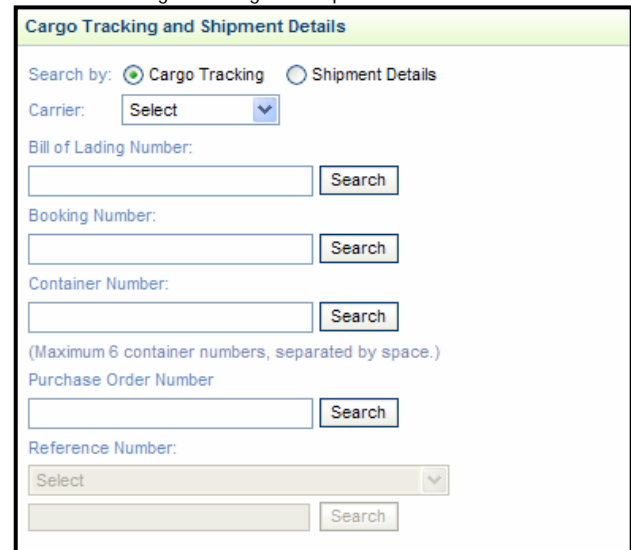

### Vessel Tracking

Vessel Tracking lets you find out a vessel's current location, estimated and actual departure times, and estimated and actual times of arrival at the next port of call.

#### Key Features

- Search for vessel information by name or key word
- View current location as well as estimated and actual times of arrival and departure

Cargo Tracking and Shipment Details Module

The screenshot shows a web interface titled "Cargo Tracking and Shipment Details Module". It features a search section with two radio buttons: "Cargo Tracking" (selected) and "Shipment Details". Below this is a "Carrier:" dropdown menu with "Select" as the current value. There are four search input fields, each with a "Search" button: "Bill of Lading Number:", "Booking Number:", "Container Number:", and "Purchase Order Number:". A note below the Container Number field states "(Maximum 6 container numbers, separated by space.)". At the bottom, there is a "Reference Number:" dropdown menu with "Select" as the current value and a "Search" button.
